

### Examples of Integration Use Cases

Our **Customers** and **Partners** have utilised the K3|dataswitch platform to resolve and achieve many different integration challenges.

Find out from these examples, how **Your Company** can benefit from K3|dataswitch

“ Our main goal was to streamline our operations and free up employees time so that they can focus on other higher value tasks ”

**John Bartsch**  
Enterprise Systems Director,  
ACME United Corporation

“ We could see what was coming into and out of the business but could not see what has happening in the middle - K3|dataswitch addressed that ”

**Tom Pennington-Brookfield**  
Finance Director,  
Innovative Technology

### Examples of Integration Use Cases

#### E-COMMERCE <> ERP

The bi-directional movement of information such as sales orders, available inventory, pricing, customers and shipment information is a must for any successful E-Commerce platform.

Automated integration in this area removes manual processing, eliminates data errors and ensures the customer journey is not impacted by costly delays in shipping.

#### TIME & ATTENDANCE <> ANALYTIC'S (DATA WAREHOUSE)

Integrating a time & attendance system directly with a consolidated reporting system used as part of Business Intelligence provides not only centralised reporting but also quicker insight into resource utilisation.

Surfacing information into key reporting solutions enables organisations to make better decisions quicker and facilitates improvements in several key areas.

#### ERP <> ERP - MULTI COMPANY CONSOLIDATION

Integrating a time & attendance system directly with a consolidated reporting system used as part of Business Intelligence provides not only centralised reporting but also quicker insight into resource utilisation.

Surfacing information into key reporting solutions enables organisations to make better decisions quicker and facilitates improvements in several key areas.

#### THIRD PARTY (LOGISTICS/WAREHOUSE) <> IN HOUSE

Outsourcing or partnering with third parties requires various levels of interaction between businesses. By automating and integrating with third parties this interaction is not only reduced, its made more efficient and ensures a smooth process as part of daily operations.

### Examples of Integration Use Cases

#### ELECTRONIC DATA INTERCHANGE (EDI) <> CUSTOMERS/SUPPLIERS

Exchanging business documents such as sales, invoice and dispatch information electronically is a common practice in modern business. The challenge however lies in the many different formats (often custom) that need to be managed and then doing so without excessive charges.

K3|dataswitch provides a flexible and supportable way of implementing EDI within your organisation while keeping you in control. Work with your customers and suppliers to implement efficient EDI processes across the supply chain.

#### ERP <> RETAIL POINT OF SALES

Retail POS systems require master data from the central back office and vice versa transactional information from stores needs to flow back. The volume of data often makes this a default requirement for automation.

K3|dataswitch takes care of this hidden but key requirement to ensure your customers experience is not limited by your technology.
